Twitter Users by Month Added(每月新增微博用户数量统计)

数据摘要:

This dataset is a list of the number of user counts by the month in which the account was created collected from tweets sent between March 2006 and March 2010. Each user profile includes a timestamp for when the account was created. This dataset counts the number of users who created accounts and sorts them by year and month. Since the full scrape does not cover 100% of users, the total number of users is estimated by looking at the minimum and maximum user id number for each month. The coverage of the scrape is then calculated from this estimated number of users.

数据详细介绍:

Twitter Users by Month Added

This data comes from a scrape of the Twitter social network conducted by the Monkeywrench Consultancy. The full scrape consists of 40 million users, 1.6 billion tweets,

and more than 1 billion relationships between users.

This dataset is a list of the number of user counts by the month in which the account was

created collected from tweets sent between March 2006 and March 2010. Each user

profile includes a timestamp for when the account was created. This dataset counts the

number of users who created accounts and sorts them by year and month. Since the full

scrape does not cover 100% of users, the total number of users is estimated by looking at

the minimum and maximum user id number for each month. The coverage of the scrape is

then calculated from this estimated number of users.
