

## ZIPKIN

A distributed tracing framework

# Why Zipkin?

0.5 sec slower

20% traffic drop

1.5 sec faster

**CTR up 12%** 

## Performance matters

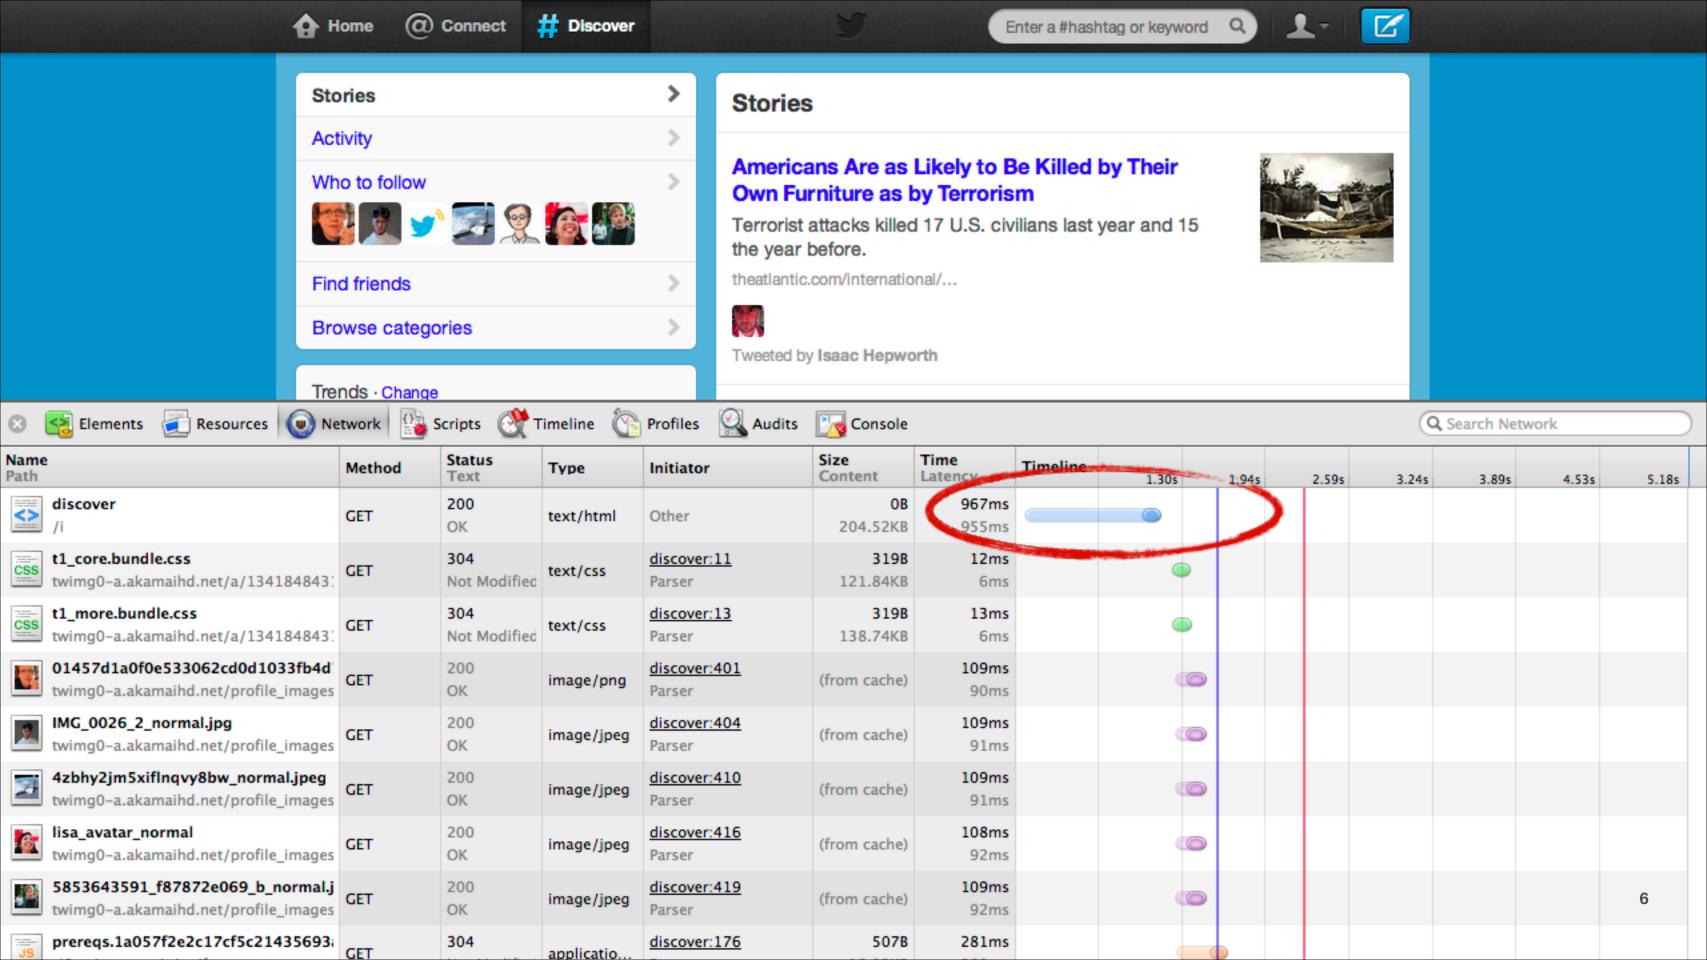

#### Front end

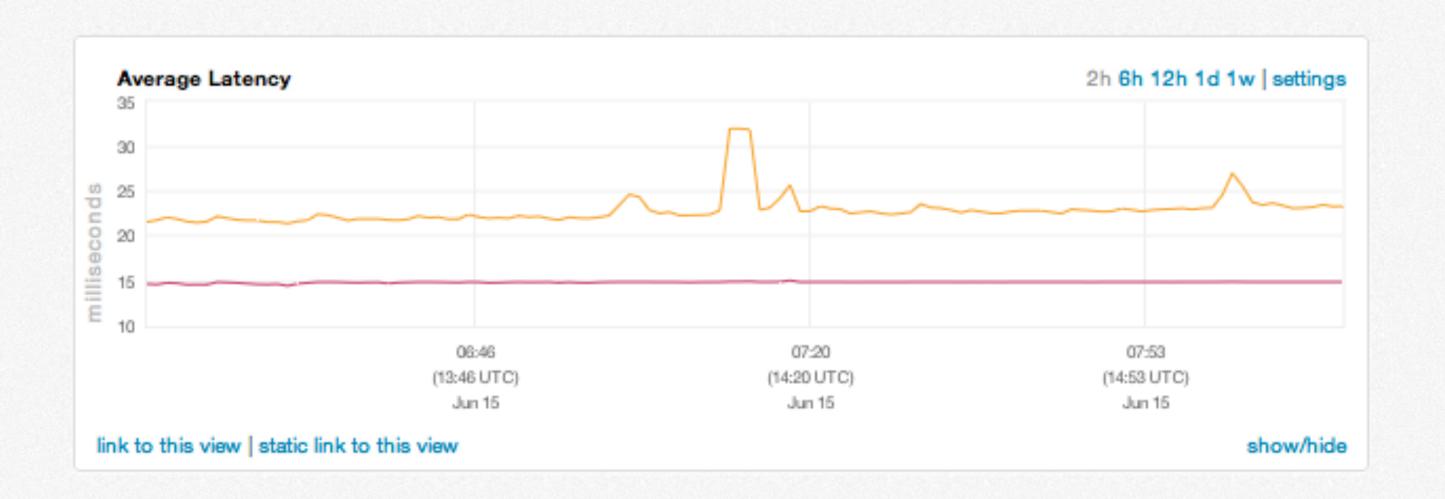

#### Back end

Collects traces from production requests

Low overhead

Minimum of extra work for developers

dapper-2010.pdf

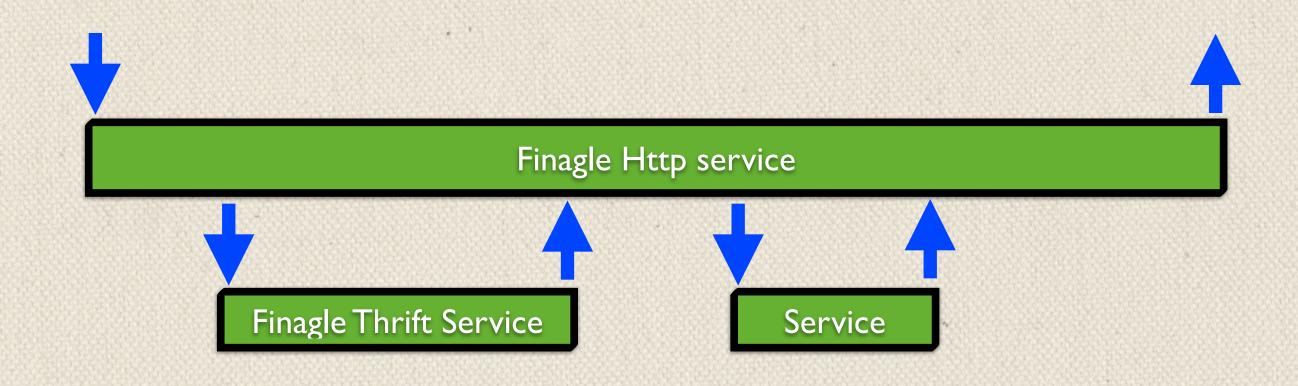

### Finagle

"Finagle is an asynchronous network stack for the JVM that you can use to build asynchronous Remote Procedure Call (RPC) clients and servers in Java, Scala, or any JVM-hosted language."

github.com/twitter/finagle

## What to capture?

## Zipkin terminology

**Annotation**: string data associated with a particular timestamp, service, and host

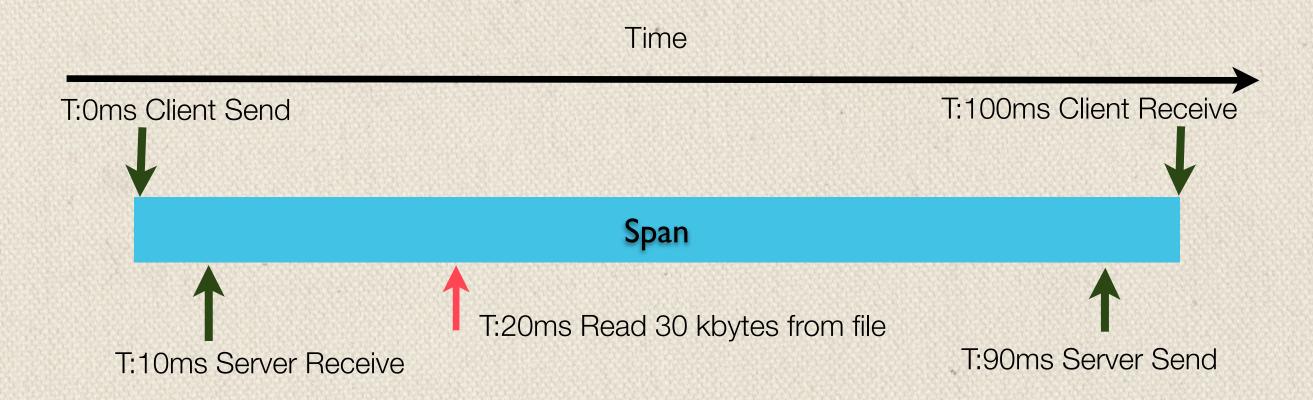

time: 2012-01-21 22:37:01 value: "something happened"

server: 135.34.53.2

service: "timelineservice"

**Span**: represents one specific method call; made up of a set of annotations. Has a name and an id.

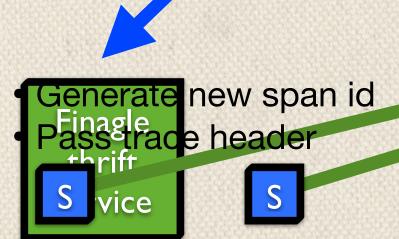

Trace: a set of spans all associated with the same request

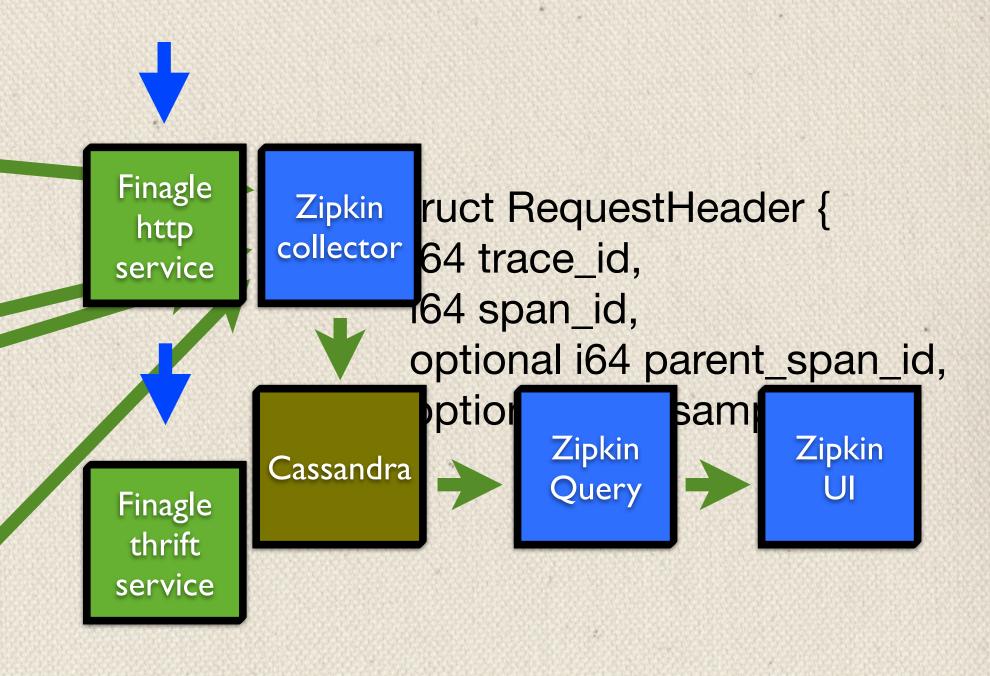

Decide if we stand sample the trace or not

• Thrift service adopts trace id from header if it exists

Finage at a fift.

#### Finagle Thrift server

```
ServerBuilder()
    .bindTo(address)
    .codec(ThriftServerFramedCodec())
    .name("servicename")
    .build(someService)
```

```
ServerBuilder()
    .bindTo(address)
    .codec(ThriftServerFramedCodec())
    .name("servicename")
    .tracerFactory(ZipkinTracer())
    .build(someService)
```

```
ClientBuilder()
    .cluster(hosts)
    .codec(ThriftClientFramedCodec())
    .name("clientname")
    .tracerFactory(ZipkinTracer())
    .build(someService)
```

1

#### Trace: record(:3700oing stuff")

value: "doing stuff"

server: 135.34.53.2

service: "timelineservice"

Trace.recordBinary("

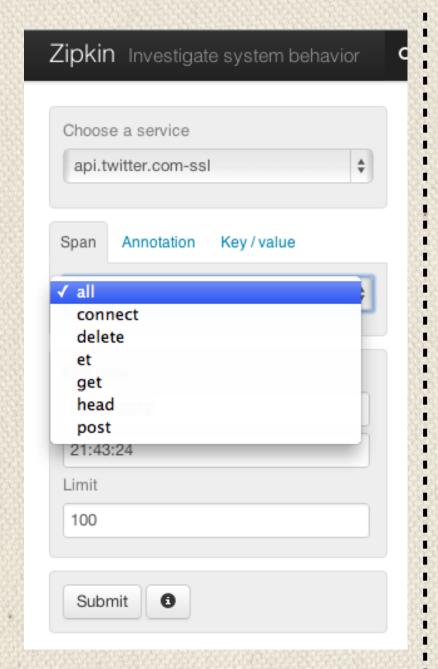

Key	Value	
keresponstate)	500	
cache:somekey	Hit	
sql.query	select *
